HeLa Cytoplasmic Lysate

Catalog No: CL-66-10445

Size: 100 ug

Source: HeLa (Human Cervix Adenocarcinoma) cell line

This material has been tested by accepted techniques and has been found to be negative for HBsAg, HIV 1/2, and HCV. Additional patient information may be available upon request.

Diagnosis: Tumor

Tissue lysate preparation:

HeLa (cervix Adenocarcinoma) Cell cytoplasmic Protein Lysate cytoplasmic protein lysate was prepared by isolating the cytoplasmic protein from whole tissue homogenates using a proprietary technique. The cytoplasmic protein is provided in a buffer including HEPES (pH 7.9), MgCl₂, KCl, EDTA, Sucrose, glycerol, and a cocktail of protease inhibitors. For quality control purposes, the isolated HeLa (cervix Adenocarcinoma) cytoplasmic protein pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated HeLa (cervix Adenocarcinoma) tissue cytoplasmic protein is then Western analyzed by GAPDH antibody, and the expression level is consistent with each lot.

Application:

HeLa (Human cervix Adenocarcinoma) cell nuclear protein lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel

Storage:

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

Usage:

This item is for LABORATORY RESEARCH USE ONLY.
