Name	Argipressin Acetate
Cat #	PP-1060
Size	100 mg and bulk custom packages
CAS#	113-79-1
Mol. Mass	1084.23
Formula	C ₄₆ H ₆₅ N ₁₅ O ₁₂ S ₂
Sequence	Cys-Tyr-Phe-Gln-Asn-Cys-Pro-Arg-Gly-NH ₂
Purity	
Appearance	
General Information	<p>Arginine vasopressin is a human hormone that is released when the body is low on water; it causes the kidneys to conserve water, but not salt, by concentrating the urine and reducing urine volume. It also raises blood pressure by inducing moderate vasoconstriction. Vasopressin is a peptide hormone. It is derived from a prohormone precursor that is synthesized in the hypothalamus, from which it is liberated during transport to the posterior pituitary.</p> <p>The primary effect of vasopressin is to increase water reabsorption in the kidneys</p>
