Name	Argireline Acetate
Cat #	PP-1070
Size	1 g, 10 g, 100 g and bulk custom packages
CAS#	616204-22-9
Mol. Mass	888.4
Formula	C ₃₄ H ₆₀ N ₁₄ O ₁₂ S
Sequence	Acetyl-Glu-Glu-Met-Gln-Arg-Arg-NH ₂
Purity	>95%

Argireline is the trade name for Acetyl Hexapeptide-3, a synthetic anti-aging cosmetic ingredient derived from natural proteins. It is a peptide; a chain made up of amino acids.

Argireline's purpose is to decrease the visible effects of aging by reducing the deep wrinkles and lines that occur around the forehead and eyes

Argireline Acetate is a hexapeptide (a chain of 6 amino acids) attached to the acetic acid residue. It is derived from proteins and works by inhibiting the release of neurotransmitters.
